## Conformity with the requirements of End-of-Life Vehicles Regulation (ELV Directive 2000/53/EC for automotive and related industries)

Dear Customers,

The European Union's End-of-Life Vehicle (ELV) Directive 2000/53/EC sets recovery targets for recycling of vehicles and components, encourages manufacturers to design their vehicles with part reuse and recycling in mind, and restricts the use of certain heavy metals in new vehicle manufacturing processes.

The directive targets recovery of waste arising from end-of-life vehicles and a reduction and control of hazardous substances. Specifically, the use of lead, mercury, cadmium and hexavalent chromium should be restricted:

- Lead limits 0.1 % (1,000 ppm),
- Mercury limits 0.1 % (1,000 ppm),
- Chromium VI limits 0.1 % (1,000 ppm),
- Cadmium limits 0.01 (100 ppm).

We hereby confirm that material produced in SIJ ACRONI d.o.o. is compliant with the article 4.2 of the Directive 2000/53/EC of European Parliament and Council of the Council of 2000-09-18 on End-of Life Vehicle and its Annex II.
